Proactively eliminating harmful and unnecessary chemicals typically applied to textiles is a central goal of Maharam's commitment to reducing environmental impact. Over the past ten years, Maharam has conducted internal research and supported third-party research to objectively evaluate the efficacy of PFAS as stain repellents. These results and our commitment to reducing environmental impact have guided us in opting to aggressively eliminate PFAS across new and existing products.

Though our years of research have illustrated that textiles without finishes are often easier to clean than their PFAS-based counterparts, these add-on finishes can be ordered when necessary.

- In order to apply acrylic backing, all textiles must be treated with stain repellent finish. Therefore, the above prices reflect both processes.
- When an acrylic backed upholstery textile is to be used as a wallcovering, it is recommended that an additional coat of acrylic backing be applied. Although maximum care will be taken when processing, Maharam is not responsible for distortion.
